EXAMINER'S AMENDMENT

- 1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
- 2. This examiner's amendment was made as provided by the response in the amendment filed November 30, 2004. The amendments to the specification submitted by applicant were not replacement paragraphs, therefore the following examiner's amendment is required.
- 3. The application has been amended as follows:
- A) The replacement paragraph provided in the response filed November 30, 2004 did not completely replace a paragraph. The following paragraph is to replace the paragraph on page 5-6, beginning at line 16 of page 5. Please replace with
- The synthesis of the cDNA was performed by reverse transcription (RT), described by Sambrook *et al.* ¹ The first copies of cDNA were synthesized using two synthesized oligonucleotides SEQ ID NO:1 and 2 (Genosys biotechnologies, Europe. Ltd., France) with the following sequences: 5'CACATTGCATTTG3' (SEQ ID NO:1) and 5'CTGTCTGTCTCA3' (SEQ ID NO:2). These oligonucleotides SEQ ID NO:1 and 2 were selected by taking the complementary sequence to allow RT. The oligonucleotide SEQ ID NO: 1 was based on the SMN sequence described by Lefebvre et al. ¹⁶ between base pairs 1097 and 1 109. The oligonucleotide SEQ ID NO:2 was based on

Art Unit: 1634

the sequence of the HUMEFIAB gene, encoding for the human elongation factor I-alpha (EFIA), described by Ann *et al.* ²⁰ between base pairs 881 and 892. This HUMEF1AB gene was used as internal standard for the control of the RT-PCR reactions. The M-MLV Reverse Transcriptase enzyme (Gibco BRL[®], Life Technologies Sarl, BP 96, 95613 Cergy Pontoise, France) was used for the reverse transcription reaction. This reaction was effected as follows: - -

- B) On page 6 of the specification, please replace lines 14-24 with
- Four synthesized oligonucleotides SEQ ID NO: 3, 4, 5, 6 (Genosys) were used. They have the following sequences: 5'CCAGGTCTAAAATTCAATGG3' (SEQ ID NO: 3) for the forward primer of SMN, 5'CTGTCTGATCGTTTCTTTAG3' (SEQ ID NO: 4) for the reverse primer of SMN, 5'TGTATTGGATTGCCACACG3' (SEQ ID NO: 5) for the forward primer of HUMEF1AB and 5'CTTCAGCTCAGCAAACTTG3' (SEQ ID NO: 6) for the reverse primer of HUMEF1AB. The oligonucleotides of SEQ ID NO: 3 and SEQ ID NO: 5 (forward primers) were based on the SMN and HUMEF1AB sequences between base pairs 661-680 and 672-690 respectively. The oligonucleotides SEQ ID NO: 4 and SQ ID NO: 6 (reverse primers) were based on the SMN and HUMEF1AB sequences between base pairs 957-976 and 705-723 respectively, in this case however, taking the complementary sequence to allow PCR. Amplification was -
- C) On page 8 of the specification, please replace lines 6-16 with

Art Unit: 1634

- The RT products were first amplified by the PCR technique performed in the same conditions as described previously using the synthesized oligonucleotides SEQ ID NO: 5 and 6 for HUMEF1AB gene and the synthesized oligonucleotides SEQ ID NO: 4, 7, 8, 9 for SMN gene. They have the following sequences:

5'GTTTCAGACAAAATCAAAAAG3' (SEQ ID NO: 7)(forward primer),
5'TCCTTAATTTAAGGAATGTGA3' (SEQ ID NO: 8)(reverse primer),
5'GAAATGCTGGCATAGAGCAG3' (SEQ ID NO: 9)(forward primer). The
oligonucleotides SEQ ID NO: 7 and SEQ ID NO: 9 (forward primers) were based on
exons 7 and 8 of the SMN sequences between base pairs 869-889 and 922-941
respectively. The oligonucleotide SEQ ID NO: 8 (reverse primer) was based on
exon 7 of the SMN sequence between base pairs 901 and 921, in this case,
however, taking the complementary sequence to allow PCR. The PCR products - -

- D) On page 9, please replace line 11 with - oligonucleotides (SEQ ID NO: 4, 7, 8, 9 for the probes 1 and 2 and SEQ ID NO: 5 and 6 for the probe 3) and the -
- 4. The following is an examiner's statement of reasons for allowance.

The claims have been significantly amended to clearly set forth applicant's invention to a quantitative method for diagnosing SMA by quantitatively detecting exon 7 and 8 of the SMN gene.

Art Unit: 1634

The closest prior art, Jung et al., teaches a method for RNA isolation using RT-PCR, however Jung does not specifically teach using a nucleic acid consisting of SEQ ID NO: 1 and SEQ ID NO: 2. Jung teaches amplifying the cDNA, however does not specifically teach amplification with a nucleic acid consisting of SEQ ID NO: 3 and 4 and 5 and 6 for HUMEF1AB. Jung further teaches a method of performing a southern blot analysis and quantification of the RT-PCR products of normal subjects, SMA patients and carries. However, Jung does not specifically teach using probes to exon 7 and 8 which consist of a PCR product amplified by a nucleic acid consisting of SEQ ID NO: 7 and 8 for exon 7 and nucleic acid consisting of SEQ ID NO: 9 and 4 for exon 8. Finally, Jung does not specifically teach a range for quantification as provided by the instant claims. As seen in Table 1 and 2 of the instant application, the SMA patients' ranges for quantitation of the probes did not overlap and was outside the range of the control patients sampled. Thus, Jung fails to teach or suggest the claimed invention as a whole.

- 5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to examiner Jeanine Goldberg whose telephone number is (571) 272-0743. The examiner can normally be reached Monday-Friday from 7:00 a.m. to 4:00 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Jones, can be reached on (571) 272- 0745.
